Research Interests

Currently working on stochastic control, nonparametric statistics, and infinite dimensional optimization. Interested in mean field games and empirical process theory.

Education

- 2024 — Now **MSc in Applied Mathematics**, FGV EMap, Brazil – RJ, 4.0/4.0.
Thesis (tentative): *Gradient-free methods in infinite dimension with applications to PDEs.*
- 2020 — 23 **BSc in Applied Mathematics**, FGV EMap, Brazil – RJ, 9.8/10.
Thesis: *Nonparametric Instrumental Variable Regression through Stochastic Approximate Gradients.*

Research Experience

- 2025 — Now **HDI estimation** We are developing a procedure to estimate highest density intervals from (possibly dependent) samples of the target distribution, including asymptotic confidence intervals. Our approach is based on generalized Z-estimation. *Joint work with Luiz Carvalho, Yuri Saporito (FGV EMap) and Charles Doss (University of Minnesota).*
- 2024 — Now **Singular stochastic control** We are studying singular stochastic control problems in which the singular control coefficient depends on the current value of the singular control itself. This feature allows the modeling of diminishing transaction costs as the total volume traded accumulates. *Joint work with Yuri Saporito (FGV EMap) and Agostino Capponi (Columbia University).*
- 2024 — Now **Master's thesis** When viewed as the minimization of an L^2 loss over a Sobolev space, PDEs become optimization problems for which exact gradients are extremely costly to compute, but directional derivatives are not. In this work, we build an algorithm which uses directional derivatives to compute infinite-dimensional stochastic gradients over general separable Hilbert spaces, and apply this methodology to PDEs. *Joint work with Yuri Saporito, Bernardo da Costa and Daniel Csillag (FGV EMap).*
- 2023 — 24 **Undergraduate thesis** Co-authored the paper “Nonparametric instrumental variable regression through stochastic approximate gradients”. We showed how to formulate a functional stochastic gradient descent algorithm to tackle NPIV regression by directly minimizing the populational risk, obtaining a more flexible and competitive method. *Joint work with Yuri Saporito (FGV EMap) and Yuri Fonseca (UCL).*
- 2022 **Undergraduate research** Research assistant for Profs. Yuri Saporito and Yuri Fonseca on a project about statistical inverse problems. I [implemented](#) the proposed algorithms in Python and proofread the manuscript. The final paper was published in [NeurIPS](#).

Publications

- NeurIPS 2024** Fonseca, Yuri, **Peixoto, Caio** & Saporito, Yuri (2024). Nonparametric instrumental variable regression through stochastic approximate gradients. *Advances in Neural Information Processing Systems*, 37, pp. 131756-131785.

Teaching Experience

- 2021 — Now **Teaching Assistant:** Linear Algebra, Probability Theory, Real Analysis, Machine Learning (undergrad level); Measure Theory, Linear Algebra, Statistical Inference (grad level). Hosted tutoring sessions, designed and graded homework and exams.
- 2023 **FGV Ampla** Served as a tutor for FGV's student-led college entrance exam preparation classes for low-income high school students.

Awards and Scholarships

- 2024 — 2026 **CAPES & IMPA** (*Brazilian Federal Agency for Support and Evaluation of Graduate Education & National Institute for Pure and Applied Mathematics*) Awarded **one of 15** national scholarships granted to Brazilian master's students in Mathematics.
- 2024 **SBMAC** Academic merit prize awarded by the *Brazilian Society for Applied and Computational Mathematics* (SBMAC) to "honor students who stand out for their academic performance in Applied and/or Computational Mathematics in STEM undergraduate courses".
- 2023 **FGV EMAp** Academic merit prize, for achieving the highest average grade of my cohort.
- 2020 — 2023 **CDMC** FGV's *Center for the Development of Mathematics and the Sciences*. Full scholarship and a stipend to complete my bachelor's degree in Applied Mathematics at FGV EMAp.
- 2017 — 19 **OBMEP** (*Brazilian Mathematical Olympiad for Public Schools*). Two Silver medals and one Bronze medal.

Event Participation

- 2025 **Presenter** CNMAC — National Congress of Applied and Computational Mathematics, Rio de Janeiro. Poster "Functional Gradient Descent through Directional Derivatives".
- 2024 **Presenter** CNMAC, Pernambuco. Poster "Nonparametric instrumental regression through stochastic approximate gradients".
- 2024 **Organizer** 12th World Congress of the Bachelier Finance Society, FGV EMAp, Rio de Janeiro, Brazil. Member of the Local Committee.
- 2023 **Presenter** RiO — Research in Options, Rio de Janeiro, Brazil. Poster "Nonparametric instrumental regression through stochastic approximate gradients".
- 2023 **Attender** LACIAM — Latin American Congress on Industrial and Applied Mathematics.
- 2022 **Attender** CNMAC, Campinas, Brazil.

Skills

Programming Proficient in Python (NumPy, Tensorflow, JAX, PyTorch). Familiar with R, Julia, C++.

Software $\text{\LaTeX}$, Git, Linux, Vim.

Languages

Portuguese Native

English TOEFL iBT 113/120
